

WORKSHOP

FOR ELEMENTARY EDUCATORS

Designed for 3rd-5th grade teachers, the Energy in Ecosystems E-Unit investigates ways in which organisms depend on each other to survive and thrive. This self-contained unit of instruction is fully online, making it easy for teachers to access and use. Students focus on forests (one of the largest and most complex types of ecosystems) and come to understand some of the interactions present in all ecosystems. In doing so, they learn to appreciate the natural systems on which we depend and begin to widen their circle of compassion to include all of nature.

Workshop approved for 4.5 hours of SCDE renewal credits

Participants will first partake in a 1.5 hour live video conference in which they will get acquainted with the South Carolina state program, learn about helpful online resources, and participate in two PLT activities. They will then get access to an electronic copy of the activity guide and the accompanying online professional development training, which will be completed individually. Once completed, participants will receive an official certificate of completion from the SC PLT program.
